

Extremely sturdy cabinet (2,5cm = 1in thick) constructed from marine high quality multi-layer plywood coated with plastic laminate, both water-resistant and brought together using a special water-proof glue for perfect sealing. Colour: blue

Heavy duty legs made from 9cm (4x4in) square steel coated with silver washable powder varnish.

High stress resistance machine-trueed hollow steel bars - diameter 16mm - coated with anti-rust chromium-plating. The quality of the materials used adds to the thickness of 2mm to prevent the bars from bending: they maintain a perfect shape for a long time. It is possible to choose between the going-through (also called solid) bars and the telescopic type.

Going-through bars: the standard bars protrude from the cabinet - at the handle opposite side - to follow the international competition standard, which is also used in many countries worldwide.

The special three-layer chromium-plating guarantees that both going-through and telescopic bars will not get rusted after several years of tough use.

Safety device (telescopic bars): on request each table can be equipped with telescopic safety bars, having the same technical features as the going-through type. The difference is in the functioning, to obtain the maximum level of safety.

In telescopic bars a smaller diameter bar glides inside the player bar, whose end does not protrude from the cabinet. This prevents dangerous strikes to the childrens' eyes and face. Its use is strongly advised if the football table is meant for children and in the event that the table must be put in a location attended by children.

Bars are fixed to the cabinet by means of nylon ball bearings.

The anti-rust stainless steel roller bearings inside the bearings fixing bars to the cabinet greatly improve the game speed, while reducing the stress for the players' wrists.

One-colour players in plastic material (moplen) representing a stylized human figure, directly moulded onto the bars: they do not move, cannot be displaced and maintain their positions perfectly. Colours: red and blue.

The table is available either with fully rotating (360 degrees) or non-rotating goalkeeper (180 degrees).

Playing field in plastic laminate glued using special water-proof glues, green with white lines. The white lines reproducing the football ground are silkscreen printed using a special ink: they do not fade under the sun nor are damaged by dampness.

Balls are introduced into the playing field manually through a conveyor placed on the cabinet next to the coin mechanism. The system is completely sealed, to prevent ball theft.

Leg levellers enable a perfectly flat playing field on uneven floors.

All bolts, nuts and screws are subjected to a tropical anti-rust treatment.

Colour coordinated abacus scorers.

10 orange Standard balls supplied, for increased visibility.

Waterproof protection cover supplied as a standard feature.
