

Sturdy cabinet constructed from medium density fibreboard 2,5cm (1in) thick medium density fibreboard with melamine coating. Colour: black with silver edges and logo.

Four protection rubbers on one side of the cabinet allow to rest the table on the ground easily, when it has been put vertical to fold the legs.

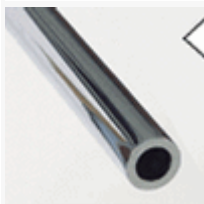

On the same cabinet side as the rubbers, the wheels allow the table to be easily moved after the legs have been folded.

Elegant slanting legs in mdf coated with melamine with 4cm (1+1/2in) thickness for great stability on the ground. Colour: silver.

Leg levellers enable a perfectly flat playing field on uneven floors.

High stress resistance machine-trued hollow steel bars - diameter 16mm - coated with anti-rust chromium-plating - The quality of the materials used adds to the thickness of 2,2mm to prevent the bars from bending, maintaining a perfect shape for a long time. On choice going-through (also called solid) bars or telescopic bars.

Going-through bars: the standard bars protrude from the cabinet - at the handle opposite side - to follow the international competition standard, which is also used in many countries worldwide.

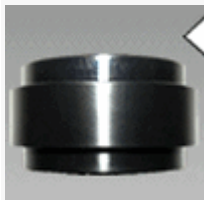

Safety device (telescopic bars): on request each table can be equipped with telescopic safety bars, having the same technical features as the going-through type. The difference is in the functioning, to obtain the maximum level of safety.

In telescopic bars a smaller diameter bar glides inside the player bar, whose end does not protrude from the cabinet. This prevents dangerous strikes to the childrens' eyes and face. Its use is strongly advised if the football table is meant for children and in the event that the table must be put in a location attended by children.

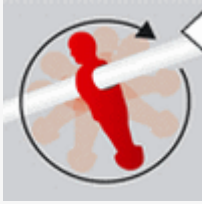

Bars are fixed to the cabinet by means of nylon ball bearings.

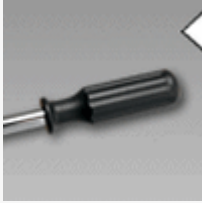

The steel roller bearings inside the bearings fixing bars to the cabinet greatly improve the game speed, while reducing the stress for the players' wrists.

One-colour players in plastic material (moplen) representing a stylized human figure, directly moulded onto the bars: they do not move, cannot be displaced and maintain their positions perfectly. Team colours: red and blue.

Fully rotating (360 degrees) or non-rotating goalkeeper (180 degrees) on choice. ITSF version with rotating goalkeeper only.

Plastic handles with ergonomic grip.

Playing field in choice of transparent glossy glass, non-reflective sanded glass or plastic laminate. Glass is 5mm thick and tempered. The silk-screen printed white lines on a green background reproduce the football ground.

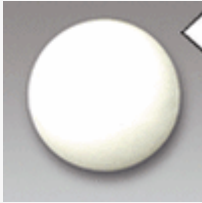

Balls served through a filler on each table side.

Easy and immediate ball retrieval through a basket in grey colour behind each goal.

Colour coordinated abacus scorers.

10 white Standard balls supplied.
